

Cover Letter — Significa (Senior Backend Developer)

Headline — *LinkedIn note to the hiring team / email opener:*

Backend developer who is production-fluent in the exact AI stack you list as preferred — LLM APIs (OpenAI, Anthropic), agent frameworks (LangGraph, CrewAI), Model Context Protocol, Claude Code daily — on a solid C# / ASP.NET Core base with real third-party-integration and identity work.

Dear Hiring Team,

I'm applying for the Senior Backend Developer role. Your preferred list — LLM API integration, vector databases, agent frameworks, and being comfortable with Claude and Claude Code — describes work I do in production, not tools I've tried. That, on top of a C# / ASP.NET Core backend base, is the case I'd make.

On the AI side, at Andalusia Health Business Solution I've built:

- LLM API integration and multi-model orchestration across OpenAI and OpenRouter, with observability (LangSmith, LangFuse), guardrails, and cost controls.
- Retrieval-augmented generation and GraphRAG systems on Neo4j, with semantic search and contextual retrieval; vector databases are a natural extension of this work.
- Agent workflows with LangGraph and CrewAI, and internal Model Context Protocol servers. Semantic Kernel is the .NET-native equivalent of tools I already use.

On the backend fundamentals:

- C# and ASP.NET Core (MVC and Minimal APIs), REST APIs and web services, SOLID, and OWASP-aware secure coding.
- Building integrations with third-party platforms and APIs — Microsoft Graph and SharePoint, and Stripe / Paymob payments with webhook and HMAC verification.
- An OpenID Connect / OAuth2 identity server (OpenIddict) with JWT and scope- and claim-based authorization; Docker, Azure, and CI/CD in Azure DevOps and GitHub Actions.

One area I'd be ramping on is the CMS layer — I haven't worked with Sitecore, Umbraco, or Kentico. They're ASP.NET Core-based and close to the web development I do day to day, so I'd expect to get productive quickly.

I'd be glad to discuss.

Best regards, Moamen Basyoni
