

Cover Letter — Misr Technology Services (Senior Software Developer)

Headline — *LinkedIn note to the hiring team / email opener:*

Alexandria-based .NET engineer who has built the secure distributed backend you're describing — an OpenID Connect identity server, a Consul + API-gateway service mesh, RabbitMQ and Temporal Saga messaging, and gRPC APIs — with data-protection and PII-masking work on top.

Dear Hiring Team,

I'm applying for the Senior Software Developer role, and I'm based in Alexandria. At Andalusia Health Business Solution I architect and build scalable, secure microservices and APIs on .NET Core and ASP.NET Core Web API — the core of what this role asks for.

Mapping to your requirements:

- C# / .NET Core / ASP.NET Core Web API following SOLID, DRY, and Clean Architecture, with Repository, Dependency Injection, and CQRS patterns.
- RESTful and gRPC API design across distributed modules; Entity Framework Core and LINQ over SQL Server and PostgreSQL.
- Event-driven and queuing patterns with RabbitMQ, plus long-running distributed transactions with Temporal Saga orchestration; Consul service discovery behind an Nginx API gateway with health-aware load balancing.
- Secure coding in authentication, authorization, and data protection: an OpenID Connect / OAuth2 identity server (OpenIddict) with JWT and scope- and claim-based authorization, OWASP-aware practices, and PII masking in a knowledge-graph system.
- Git, Docker, and CI/CD in Azure DevOps across Dev, Staging, and Pre-Live, working with QA in an Agile team; I also mentored 25 engineers through a structured onboarding program.
- An API gateway that cut deployment downtime from two hours to fifteen minutes, and a runtime business-rule engine that improved execution performance by 45%.

One honest gap: my front-end experience is JavaScript and TypeScript with jQuery and Ajax, not production React or Node.js. I'm building a React single-page application on a .NET Core API to get hands-on with the component model; my strength is clearly backend and architecture.

I'd welcome the chance to talk.

Best regards, Moamen Basyoni
