

Cover Letter — Raya Holding (Software Development Specialist, .NET)

Headline — *LinkedIn note to the hiring team / email opener:*

.NET engineer with architecture-level wins at the ~3-year mark: a runtime business-rule engine that runs 45% faster, an OpenID Connect identity server, and an API gateway that cut deployment downtime from two hours to fifteen minutes — all on a large enterprise codebase, with AI-assisted delivery day to day.

Dear Hiring Team,

I'm applying for the Software Development Specialist (.NET) role. For the past ~3 years at Andalusia Health Business Solution I've designed and built .NET applications on a large enterprise codebase serving the Andalusia hospital group in Egypt and Saudi Arabia — with a track record of measurable engineering impact, not just feature delivery.

Concretely:

- I built a runtime business-rule engine for injected business logic that improved rule-execution performance by 45% (measured with BenchmarkDotNet).
- I implemented an API gateway with health-aware load balancing and parallel service versioning that cut deployment downtime from two hours to fifteen minutes.
- I designed and implemented an OpenID Connect / OAuth2 identity server (OpenIdDict) with JWT and scope- and claim-based authorization.
- Day to day I work on ASP.NET Core and modern .NET with SOLID, design patterns, and Clean Architecture, Entity Framework Core over SQL Server, RESTful APIs across microservices, Docker, and CI/CD in Azure DevOps within an Agile team.
- I also modernized legacy modules from .NET Framework 4.5 toward modern .NET, and I use AI-assisted development (Model Context Protocol tooling, automated code review) in daily delivery.

On the front end, my background is JavaScript, TypeScript, jQuery, and Ajax rather than production Angular. I'm building an Angular single-page application against a .NET Core API to close that gap and would be glad to share it.

I'd welcome the chance to discuss how I can contribute.

Best regards, Moamen Basyoni
