

Cover Letter — Misbar Alkawn (Senior .NET Backend Developer)

Headline — *LinkedIn note to the hiring team / email opener:*

.NET engineer doing your exact project right now — decomposing a monolithic enterprise system into distributed .NET 8 services, with RabbitMQ, Consul service discovery, an identity server, and an API gateway that cut deployment downtime from two hours to fifteen minutes.

Dear Hiring Team,

I'm applying for the Senior .NET Backend Developer role. What stood out is that the core of the job — maintaining .NET 8 services while migrating a monolith to microservices — is what I've been doing for the past ~3 years at Andalusia Health Business Solution.

Directly relevant:

- I contribute to an ongoing decomposition of a large monolithic .NET codebase into distributed services for the Andalusia hospital group, collaborating on API design, service boundaries, and database separation across 5 core and 7+ additional modules.
- Event-driven communication with RabbitMQ, service discovery and dynamic routing with Consul, and an Nginx API gateway with health-aware load balancing and parallel service versioning that cut deployment downtime from two hours to fifteen minutes.
- Modern .NET (8/9/10) with async patterns throughout, clean testable C# with xUnit, and Entity Framework Core over PostgreSQL and SQL Server.
- On security and compliance: I built an OpenID Connect / OAuth2 identity server (OpenIddict) with JWT and scope- and claim-based authorization, applied OWASP-aware secure coding, and worked on PII masking for a knowledge-graph system — useful for the security standards and compliance audits you mention.
- A runtime business-rule engine that improved rule-execution performance by 60%, plus routine production troubleshooting and performance work, all delivered through Azure DevOps CI/CD.

To be upfront: I'm at roughly three years rather than five, and a few stack items — Dapr, Kafka, Dapper — I haven't used in production, though they sit on concepts I work with daily (service invocation and pub/sub, partitioned messaging, lightweight data access). I'd come in already fluent in the migration itself.

I'd welcome a conversation.

Best regards, Moamen Basyoni
