

Cover Letter — Müller's Solutions (.Net Developer)

Headline — *LinkedIn note to the hiring team / email opener:*

Three years building web applications and Web APIs on C#, ASP.NET Core and Entity Framework over SQL Server — across both a large legacy .NET Framework codebase and greenfield products built from scratch.

Dear Hiring Team,

I'm applying for the .Net Developer role. The stack you've listed is what I work in every day.

As an R&D engineer at Andalusia I build web applications and **Web APIs on C# and ASP.NET Core** — MVC and Minimal APIs — with **Entity Framework Core and LINQ over SQL Server**, and interactive front-end behaviour in **JavaScript, jQuery and Ajax**, hosted on IIS. A few things from that work:

- Built a runtime business-rule engine for injected business logic that improved rule-execution performance by **60%**, measured with BenchmarkDotNet.
- Implemented an OpenID Connect / OAuth2 identity server with JWT and scope-based authorization.
- Modernized 5 core and 7+ additional modules from **.NET Framework 4.5** and ASP.NET Core 2.2 to modern .NET with Clean Architecture — so I'm comfortable in both legacy and current codebases.
- Built the distributed layer: Temporal Saga orchestration, RabbitMQ messaging, and an API gateway that cut deployment downtime from two hours to fifteen minutes.
- Delivered CI/CD in Azure DevOps with Docker, working in an Agile team, and mentored 25 engineers through a structured onboarding programme.

Alongside that I've delivered products end to end — a short-term rental booking platform built from scratch as technical partner at Trastain, and e-commerce and booking systems at MYM — both including Stripe and Paymob payment integration with webhook and HMAC verification. That client-delivery experience, from requirements through deployment and support, is probably relevant to how you work.

I'd welcome the chance to discuss the role.

Best regards, Moamen Basyoni
