

Cover Letter — Raya CX (Full Stack Developer, .Net)

Headline — *LinkedIn note to the hiring team / email opener:*

Three years building web applications and REST APIs on C# and ASP.NET Core with TypeScript on the front end — delivering end to end, from requirements through deployment and support, on both a large enterprise platform and products built from scratch.

Dear Hiring Team,

I'm applying for the Full Stack Developer (.Net) role. My day-to-day is the stack you've described: C# and ASP.NET Core on the back end, Entity Framework Core over SQL Server and PostgreSQL for data, and TypeScript, JavaScript, HTML and CSS on the front.

From my current work at Andalusia:

- Build web applications and **RESTful APIs** across a large enterprise platform serving hospitals in Egypt and Saudi Arabia.
- Built a runtime business-rule engine that improved rule-execution performance by **60%**, measured with BenchmarkDotNet.
- Implemented an OpenID Connect / OAuth2 identity server with JWT and scope-based authorization.
- Built the distributed layer — Temporal Saga orchestration, RabbitMQ messaging, service discovery and an API gateway that cut deployment downtime from two hours to fifteen minutes.
- Modernized 5 core and 7+ additional modules from .NET Framework 4.5 to modern .NET with Clean Architecture.
- Work in an Agile team with Azure DevOps CI/CD and Docker, run technical code reviews, and mentored 25 engineers across 6 teams through an onboarding programme I delivered.

What I'd add beyond the stack is end-to-end delivery experience. At MYM, a software house, I built e-commerce and booking systems for clients — hotel, gym and other reservation platforms — handling requirements analysis through deployment and support, working directly with the client. At Trastain I joined as technical partner and built a short-term rental platform from scratch, including Stripe and Paymob integration with webhook and HMAC verification. Taking something from a conversation to a running system is the part I enjoy most.

On English: I'm at B2, upper-intermediate. I work daily in English-language codebases and documentation and I'm comfortable in technical discussion, and I'd rather state my level accurately than overstate it.

I'd welcome the chance to talk.

Best regards, Moamen Basyoni
