

Cover Letter — Hire Feed (.NET Developer, Remote)

Headline — *LinkedIn note to the hiring team / email opener:*

Every item on your required list — C#/.NET, REST APIs with external integrations, SOLID/Clean Architecture, SQL Server or PostgreSQL, CI/CD, testing — is something I do daily, and I bring both Azure and AWS rather than just one.

Dear Hiring Team,

I'm applying for the .NET Developer role. Rather than pick one requirement to lead with, I'll go through the list directly, since every item is something I actually do: C# and .NET (both Core and Framework) daily for three years; RESTful APIs integrating external services including payment gateways and Microsoft Graph; SOLID principles and Clean Architecture as the standard I build to; Entity Framework Core over SQL Server and PostgreSQL; Git and CI/CD on both Azure DevOps and GitHub Actions; and unit/integration testing with xUnit.

Beyond the baseline, I've replaced a legacy distributed-transaction design with Temporal Saga orchestration and built the identity, service-discovery, and API-gateway infrastructure around it — work that cut deployment downtime by 87.5%. I work across both Azure and AWS depending on the project, which covers your "Azure or AWS" preference either way.

I'm comfortable fully remote and can start promptly.

Best regards, Moamen Basyoni
