

Cover Letter — KHABEER Group (Mid-Level Full Stack .NET Developer)

Headline — *email subject / opener:*

C# / .NET backend developer, ~3 years hands-on — REST & Web API over SQL Server, legacy .NET Framework maintenance and modernization, Git + Azure DevOps delivery in an Agile team.

Dear Hiring Team,

I'm applying for the Mid-Level Full Stack .NET Developer role. As an R&D engineer at Andalusia Health Business Solution, I build backend systems in **C#**, applying **OOP and design patterns** daily, with **Web API / REST** services and **SQL Server** data access through Entity Framework Core. Concretely:

- Migrated 5 core and 7+ additional modules off legacy **.NET Framework 4.5** — direct experience maintaining and modernizing an older codebase rather than only greenfield work.
- Built a REST-based identity/authentication server and an API gateway, cutting deployment downtime from two hours to fifteen minutes.
- Delivered CI/CD through **Git** and **Azure DevOps**, having migrated our own source control off **TFVC**, in an Agile/Scrum team with code review as standard practice.
- Worked across the stack with **JavaScript, jQuery, HTML and CSS**.

Two things I want to be direct about: I haven't worked with **WCF/SOAP** or **DevExpress** specifically — my API work has been REST/Web API throughout, and I'd rather say that plainly than imply otherwise. I pick up frameworks quickly (the .NET Framework 4.5 modernization work is one example of that in practice) and would expect to be productive with either fast.

I'd welcome the chance to discuss.

Best regards, Moamen Basyoni
