

Cover Letter — Geidea (.NET Developer, Mid-Level)

Headline — *LinkedIn note to the hiring team / email opener:*

.NET 8 microservices and REST APIs over SQL Server and PostgreSQL, with real payments integration — Stripe and Paymob, webhook processing with HMAC signature verification. Three years in, which is exactly the bar you've set.

Dear Hiring Team,

I'm applying for the .NET Developer (Mid-Level) role. Two things make me a close fit: the stack matches almost exactly, and I've built on the payments side of it.

On the stack — as an R&D engineer at Andalusia I build microservices on **C# and .NET 8/9/10 with ASP.NET Core**, design **REST** and gRPC API contracts before implementation, and design data access with **Entity Framework Core over SQL Server and PostgreSQL**. Concretely:

- Built a runtime business-rule engine that improved rule-execution performance by **45%**, measured with BenchmarkDotNet.
- Implemented an OpenID Connect / OAuth2 identity server with JWT access and refresh tokens and scope-based authorization.
- Built the distributed layer — Temporal Saga orchestration, RabbitMQ messaging, Consul service discovery, and an API gateway with health-aware load balancing that cut deployment downtime from two hours to fifteen minutes.
- Modernized 5 core and 7+ additional modules from .NET Framework 4.5 / ASP.NET Core 2.2 to modern .NET with Clean Architecture.
- Delivered CI/CD in Azure DevOps with Docker across Dev, Staging and Pre-Live, in an Agile team.

On payments — at Trastain and MYM I integrated **Stripe and Paymob**, including **webhook processing with HMAC signature verification** and transaction security for booking execution. Given what Geidea does, that's the part of my background I'd expect to be most immediately useful.

One thing I want to be straight about: on the front end I directed our Angular migration — from a legacy Vue 3 shell with embedded AngularJS to a modern Angular shell architecture on PrimeNG — but that was architecture and oversight rather than hands-on Angular development. I have working knowledge and TypeScript is solid, and I'd rather tell you that up front than have it surface later.

I'd welcome the chance to discuss.

Best regards, Moamen Basyoni
