Dear Hiring Team,

I'm applying for the Senior .NET Developer position. The part of this role that fits me best is the Microsoft-ecosystem integration: you want someone building web applications that connect to Dynamics 365 and SharePoint, and I've done exactly that kind of work — I built a SharePoint management agent and Microsoft 365 automation on the Microsoft Graph API as part of a live enterprise product at Andalusia Health Business Solution.

Mapping to the rest of your requirements:

- Three-plus years of hands-on C# and ASP.NET Core (MVC and Minimal APIs), developing and consuming RESTful APIs, with object-oriented design and common patterns; Entity Framework Core over SQL Server.
- Front-end delivery with JavaScript, jQuery, Ajax, HTML, and CSS, and server-rendered applications hosted on IIS.
- E-commerce and booking backends delivered end-to-end at MYM and Trastain, including Stripe and Paymob payment integration with webhook processing and HMAC signature verification.
- Git and Azure DevOps CI/CD, with deployments to Microsoft Azure (Azure Web Apps / App Service, Azure Static Web Apps).
- Mentoring: I ran an eight-session architecture and AI-assisted-development onboarding program that reached 25 engineers across 6 teams.

To be upfront: I haven't worked with NopCommerce or Dynamics 365 specifically. NopCommerce is ASP.NET Core-based and close to the e-commerce backends I've built, and Dynamics exposes a Web API much like the Microsoft services I already integrate — I'm confident ramping on both quickly.

I'd welcome the chance to discuss.

Best regards, Moamen Basyoni
